

INTERNAL PRODUCT DEMO

Price Estimator

AI-driven commercial bracketing for flexible workspace
leases

Static pricing hides the real cost of flexibility

Single seat rate

Operators list one price, ignoring lease duration and volume discounts.

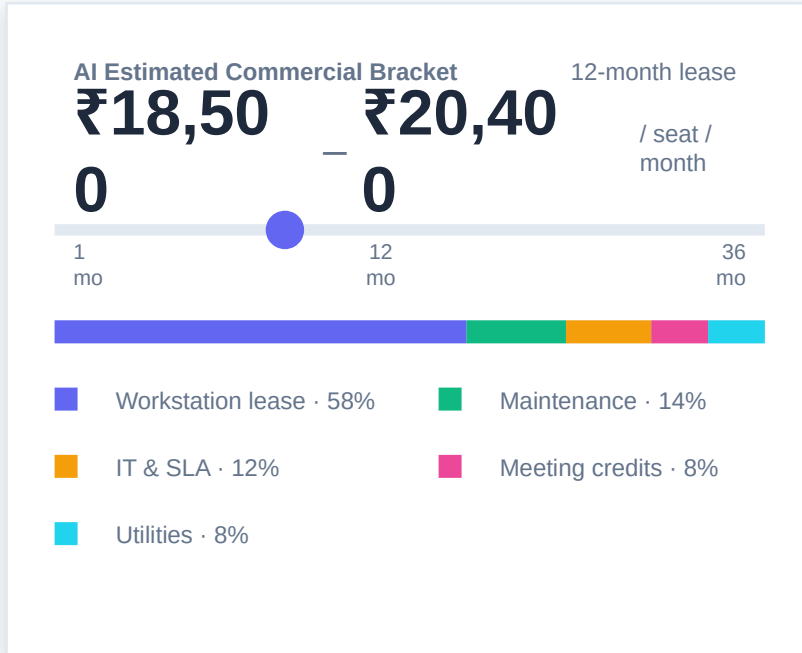

No total-cost view

Teams can't compare 1-month vs 36-month cost of occupancy at a glance.

Opaque procurement

Finance lacks transparency into what drives the final monthly seat price.

Dynamic price bracketing, one slider away

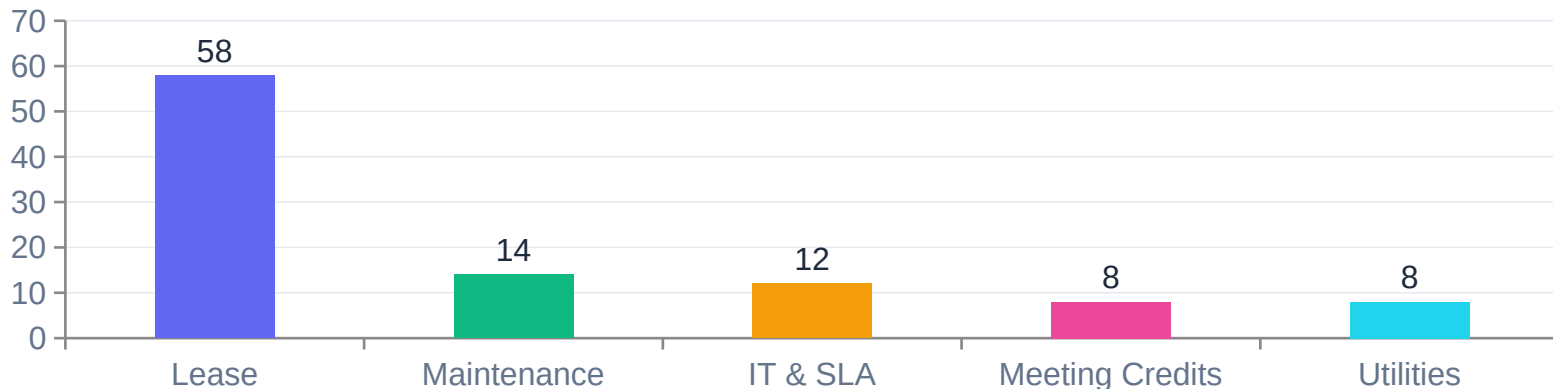

- Lease duration slider (1–36 months) updates the bracket instantly
- Low/high bounds derived from base seat price + duration factor
- Component-share bar shows where the money goes

Behind the bracket

Lease discount curve

$$\text{factor} = 1 + (12 - \text{months}) \times 0.012 - \max(0, \text{months} - 12) \times 0.005$$

$$\text{bracket} = \text{basePrice} \times \text{factor} \times [0.96 \dots 1.06]$$

What this unlocks

Instant

Quote range for any
lease length

Transparent

Cost breakdown for
procurement

Faster

Comparison across
operators

Ready to integrate live operator pricing APIs.
